

Electric Side-Roll Roll tarping system

The Electric Side-Roll (ESR) 2000 is an electric side-to-side lock and roll tarping system designed with durability, safety, cold weather performance, versatility, convenient installation and repair, and ease-of use in mind. The waterproof ESR2000 kit features a heavy-duty electric motor, one button open and close controls and a reinforced aluminum front arm with spring assembly. Available in direct drive or chain drive motor assembly, it is ideal for many hauling applications including grain, agriculture, coal, and construction to maximize load types and increase revenues on return trips.
